

Event Driven Programming Case Study Proposal

I. Proponents

1. Student Name 1
2. Student Name 2
3. Student Name 3
4. Student Name 4
5. Student Name 5
6. Student Name 6

II. Section and Class Schedule

III. Date of Submission

IV. Project Title

V. Introduction

A. Give a brief background about your proposal.

B. Cite who will be your target users and how they will benefit from your web application

VI. Objective of the study

(e.g) The objective of this study is to develop a Payment System for MERALCO.

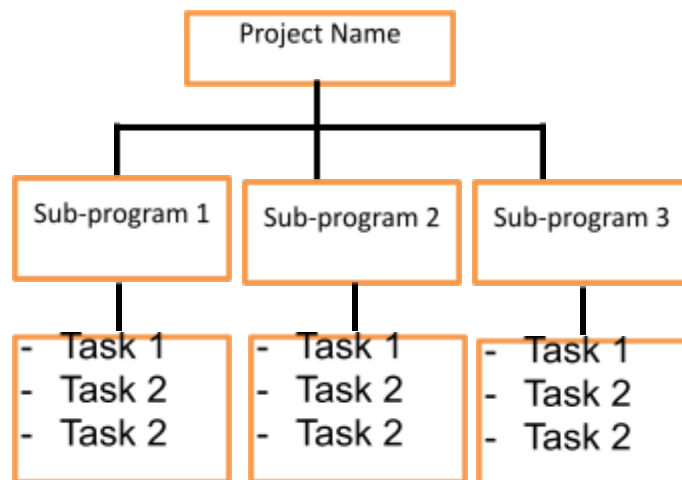

Specifically,

1. To compute the power consumption of consumer per month
2. To display....
3. To generate....

VII. System Design

1. System Flowchart

Example:

Note:

- Your project name is the title of your approved program/system
 - Subprograms represent the user options or menu of your program
 - Tasks represent sub-options or actions under a sub-program
2. Illustrate how you plan to display your outputs by showing your different screen layouts using MS Word only.

Note:

1. Propose a program that is transaction-based that will use or utilize all the PHP constructs (except for enrollment, banking, library). (I/O, Conditional, Looping, Array implementation, and Database manipulation)
2. Insert page number.
3. The leader will provide reports and make sure all members contribute and need to present on the defense day.

Thank you and happy working with your case study proposal ☺
